

APPLICATIONS

Used to tint polyester adhesives or resins to create a custom color. Use one or combine several to achieve the desired color.

PROPERTIES

- Highly concentrated color, only a small amount is needed
- Mixes easily into polyester resin, will not settle
- Permanent color - will not migrate
- Paste consistency

PROCESSING CONDITIONS

- Use up to 2% of coloring paste, more than this could affect the curing of polyester product.
- Add the coloring paste into the resin and mix until homogeneous color is obtained.

PRECAUTIONS

Normal health and safety precautions should be observed when handling these products:

- Ensure good ventilation
- Wear gloves and safety glasses

For further information, please consult the Material Safety Data Sheet.
